INSTRUCTIONS DE SECURITE

La conception, le montage et la mise en service de la pergola et de son système photovoltaïque ne doivent être effectués que par du personnel dûment qualifié et habilité. Une exécution inadéquate peut causer des dommages à l'installation et mettre des vies en danger.

La bonne qualification de l'installateur est exigée pour l'application des aides éventuelles (prime et tarif d'achat). Renseignez-vous localement.

Les normes électriques et de constructions nationales et locales, les règlements divers ainsi que les directives concernant la protection de l'environnement en vigueur doivent impérativement être respectés.

Avant le montage, il incombe à l'installateur de vérifier la capacité d'ancrage du sol et du mur attenant le cas échéant. MPS ne pourra être tenue pour responsable du non-respect des consignes concernant les ancrages et des conséquences qui en découleraient.

Avant le montage, vérifiez que vous êtes en possession de la version à jour des instructions de montage sur notre site internet : <http://mapergolasolaire.com/supports/>. Tout au long du montage, assurez-vous qu'au moins un exemplaire des instructions de montage soit disponible sur le chantier. Veuillez prendre en compte les instructions de montage du fabricant des modules photovoltaïques et vérifier que ces derniers sont en adéquation avec les surcharges climatiques du lieu d'implantation.

Ces vérifications incombent à l'installateur.

Domaine d'emploi : Les pergolas MPS ne peuvent être installés qu'en respectant les règles précisées dans le document en page 4.

Procédez au démontage du système en suivant les étapes de montage dans le sens inverse.

SAFETY INSTRUCTIONS

Design, installation, and commissioning of the pergola and its photovoltaic system must be performed by qualified personnel only. Incorrect execution can result in damage to the system and can put lives in danger.

The qualification of the installer may be a prerequisite to incentives (subsidies and feed-in tariffs). Please check locally.

National and local electrical and construction standards, the various regulations and all directives in force concerning environmental protection must be observed.

It is your responsibility, before installation, to check the ground anchoring capability and the wall resistance if the pergola is contiguous to the house. MPS shall in no way be responsible for any consequences due to a bad anchoring.

Before installation, check that you have the up-to-date version of the installation instructions by visiting our website: <http://mapergolasolaire.com/supports/>. Throughout the installation operation, make sure that at least one copy of the installation instruction manual is available on site.

Please be aware of the installation instructions provided by the manufacturer of the photovoltaic modules or thermal sensors and check that they are compatible with the climatic loads of the site.

The fitter is responsible for performing this check.

Field of use : IMPS Pergolas may only be installed in accordance with the rules set out in the document on page 4.

To remove the system, apply the installation procedure in reverse.

minimum ballast

Lestage minimum / minimum ballast

Comme précédemment défini, la pergola doit être fixée sur une dalle béton de 8cm d'épaisseur minimum, ou avec des plots béton de dimension minimum 0,5x0,5x0,5 m , pour garantir la stabilité de l'ouvrage.

Dans certaines conditions (catégorie de terrain...), ce lestage doit être augmenté : se référer au tableau ci-dessous qui détermine le poids minimum de lestage à chaque pied.

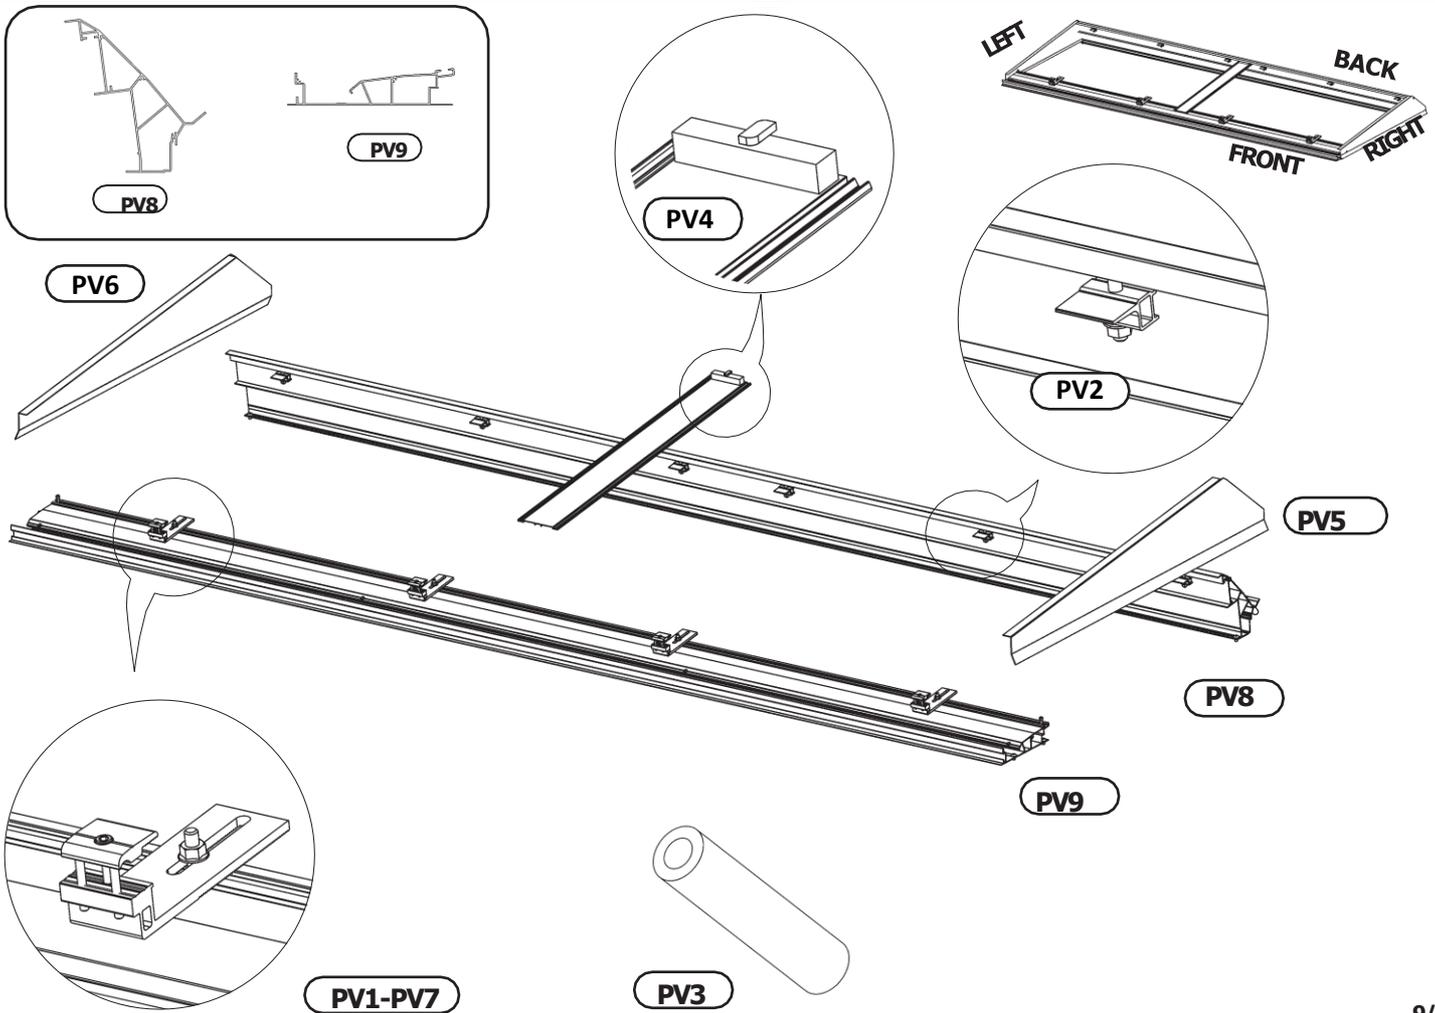

P _{lest} (kg)	0	II	IIIa	IIIb	IV
Guyane	260 kg	125 kg	25 kg		
1	425 kg	245 kg	115 kg		
2	550 kg	335 kg	170 kg	45 kg	
3	670 kg	425 kg	235 kg	80 kg	
4	805 kg	535 kg	305 kg	125 kg	
Martinique			570 kg	305 kg	90 kg
Réunion			670 kg	370 kg	125 kg
Guadeloupe			780 kg	435 kg	170 kg

As previously defined, the pergola must be fixed to a concrete slab at least 8cm thick, or with concrete blocks at least 0.5x0.5x0.5 m in size, to guarantee the stability of the structure.

Under certain conditions (type of terrain, etc.), this ballast must be increased: refer to the table above, which determines the minimum ballast weight for each foot.
